PROJECT TITLE: EARLY PREGNANCY TRACKING APP

INTRODUCTION: Our project aims at developing a mobile application to prevent early pregnancy among teenagers through educating young girls about reproductive health responsible decision making among adolescent and the importance of focusing on their education and future goals.

Background information/Hypothesis

Early pregnancy among teenagers remains a major social and public health concern in the world, with approximately 300,000 to 400,000 teenage pregnancies reported annually. A significant number of these cases occur among girls aged 12 to 17 years old especially in rural areas and informal urban settlements. Many teenage girls are forced to drop out of schools due to unintended pregnancy limiting their educational opportunities and future career goals. Future career goals contributing factors include lack of comprehensive reproductive health education, peer pressure, poverty, limited parental guidance and low access to youth friendly health services, also inadequate awareness about irresponsible decision making increases the risk.

Approach:

To address these issues, this concept introduces innovative mobile application to prevent early pregnancy among teenagers. The application provides easy to understand interactive features and guidance to help teenagers make safe choices and plan for a better future, it also has quizzes and videos that also encourage communication to users, by combining education with practical tools, the application aims to raise awareness, empowerment and promote healthy life style and positive future. In addition, the application helps users set personal goals understand the consequences of early pregnancy and learn how to prepare for better future. This application aims to raise awareness, empowerment and promote healthy lifestyles. key features will include interactive educational content, frequently asked questions, myth busting section, anonymous chat support, access to nearby health service .The app will protect privacy, confidentiality and accessibility to encourage safe and informed decision-making among adolescents.by leveraging mobile technology ,this project seeks to bridge the information gap, reduce misinformation and empower teenagers to make responsible reproductive health choices .Ultimately the application intends to contribute to lowering the rates of pregnancy and promoting adolescent wellbeing.
